INS Security Policy

1. Introduction

Security is critical to the success of INS's[1] strategy. It's much more than a simple enabler and is considered a unique selling point for the organisation. It is essential that INS adopts effective security arrangements to deliver its strategy, providing its stakeholders (including employees) and customers with confidence in our organisation. We don't just want to do security, we want to live and breathe it.

2. Purpose & Scope

The purpose of this policy is to outline INS's commitments in developing, implementing and managing its security arrangements. This policy applies to all INS staff and contractors and captures the full spectrum of security, namely, personnel, physical, information (inclusive of Sensitive Nuclear Information (SNI)), cyber, supply chain, and operational security.

3. Commitments

INS adopts an integrated approach to security based on a number of overarching principles including the 'need to know', 'defence in depth' and 'graded approach'. In doing so it is reliant upon effective technology, procedures, and people. In applying its security arrangements INS will ensure compliance with all pertinent legislative and regulatory instruments.

To achieve this INS will:

- Obtain and, as appropriate, disseminate security threat information
- Articulate its security risk appetite
- Continue to comply with all relevant regulations and legislation
- Deliver strong security leadership and governance
- Appoint suitably qualified and experienced personnel to design and deliver credible security arrangements and expert security advice
- Provide sufficient education and training for staff and contractors
- Sustain an effective security culture that is inclusive, motivational, and valued
- Be innovative in its approach to technology, procedures and people
- Take appropriate action against those who breach our security expectation
- Conduct effective security oversight of our supply chain
- Listen and act upon security concerns
- Ensure security arrangements are proportionate and security measures are enabling
